CARS

By Ved Shah

What Are CARS?

A car is a auto mobile that has an engine, in the engine 3 things mix to make power. These things are Gas, Oil, and Air. When those 3 things mix it creates sparks and that creates power to turn the pistons that turn the wheels of the car. If you want to learn what lots of different cars are known for you chose the right book.

Sports CARS

Dodge Challenger

This is a dodge Challenger 2018 model. It is a V-8 sports car with a transmission 6 manual gears + Reverse, Drive, Neutral & Park. American polices use many dodges.

Porsche Carrera GT

A Porsche is between a V-8 and V-10. These Porsches are incredibly fast cars. Their top speed written on their speed gauge is around 200-250! Porsches are thin and short because if they are tall the air that is coming towards them hits them and the car can't go as fast because it has to fight the current, so if it is short the air will just fly over it and the car can focus on speeding.

Audi A4

This is a luxury grand car is an Audi A4, a 2012 model. It has a nice screen and a nice ac/heating system control. Of course, Audis always have cool front lights. There symbol is similar to the Olympics symbol, only there is only one row and 4 rings on it.

Luxury CARS

Mercedes-Benz C300

This Mercedes-Benz c300 is one of the cool Mercedes-Benz because of the front lights, they look like eyebrows! Mercedes-Benz c300 is my favorite one because I like the inside shape, outside shape, side mirror, tail, and front lights. It sounds so cool because it is a luxury car!

Cadillac XTS

This is one of my favorites The Cadillac XTS! It is a luxury car big time for example some cars have seat heaters, this one has a seat heater and a seat cooler that cools the seat when you are hot. Also it shows you the weather but it is not as fast as it looks. It's acceleration is not as powerful as you expect. But it is a very quiet car and its sound barrier is very thick, on the highway you can barely hear the sound of the highway road. This Cadillac XTS is one of the best cars I have ever known.

Smooth / Compact CARS

Volkswagen e-Golf

This is a Volkswagen e-golf, now there is a Volkswagen golf and there is a Volkswagen e-golf. The e-golf looks similar but the only difference is the e-golf is electric. You can tell the difference by looking at the rims of both of them. Like the i3 it is a small and compact car.

BMW I 3

A BMW i3 has just started being made. It has very good acceleration and is a fast electric car. It is a small and compact car. The different part is that the back door opens back with a hitch that connects to the front door so you have to open the front door to open the back door.

Ordinary CARS

Toyota Camry

There are many Toyotas in the world, and I think this is the best one so far. This Toyota Camry is a 2018 model. It has an Apple iPhone-x cover charger mat and it is a V-6 instead of a V-4. And of course, it looks smaller and more sporty.

Ford T

This is a very very old car, in fact, it is the first car! It was invented by Henry Ford. The first car was a ford model T. it had small pedals that turned the motor to turn the wheels. Henry Named the car company after his last name, so that is how Ford exists today. After Henry other companies started manufacturing cars. In the mid 1900s They started making electric cars that run on battery, but most of the companies shut down because there electric cars all kept on breaking down.

Thank You . . .
